

10. The SupraComputer

Dear Parent/Coach,

There is an amazing Tool invented in about 2017 which makes learning and practicing STEM Math Much Easier and Fun.

It will Amplify the time of any STEM Student or Pro.

It is called the SupraComputer: <https://supracomputer.org/>

It is based on the Raspberry Pi Computer which contains Mathematica, Wolfram Alpha, and Wolfram Language. No other Computer I know of does this.

Now the RPi can be challenging to use if you aren't a computer techie, like me. So, we had an engineer make it much easier to use with a special SD card.

The SupraComputer makes using Wolfram Alpha much better since you can store WA Solutions in a Notebook.

And, many STEM students will want to learn to use Wolfram Language (2016) which makes creating Mathematica Programs much easier.

You can connect the SupraComputer to any HDMI TV or Monitor and any Keyboard and/or Mouse.

It runs off a DC Power Supply. So you must have it hooked to electricity. There is NO Battery.

There are also many other things one can do with it with children and adults of all ages.

And, it is the most secure computer to travel with that's possible that I will elaborate on in the Video for the Message.

It costs \$299, but a student can earn one by joining my Club.
<https://www.triadmthinc.com/club/>

I'll explain a little more about this in the Video that goes with this Message.

If you have a STEM student who is going to study Tiers 4,5,6 then you definitely want to get that student a SupraComputer.

Golden Rule! Big Time now.

Craig Hane, Ph.D. aka Dr. Del
