

Private 8 - 12 Grades School Message

Triad Math Inc.'s, TMI, Mission is to Empower any teenage student to obtain an Optimal 21st Century Math Education which will enable them to pursue whatever career path the student might pursue in the future.

If Your School shares the Mission there may be three ways TMI can help you achieve your Mission.

1. If you have any teenage student who is struggling with math or doesn't like math, Then TMI has an Online Program you may use to supplement Your School's regular math program that will transform this student into a very successful math student.
2. If you have a teenage student who is interested in any STEM subjects TMI has an amazing 21st Century Online Program that utilizes the incredible 21st Century Math Tool, *Wolfram Alpha*, that will get the student through PreCalculus subjects, Calculus and Differential Equations in a way that is vastly superior to the old obsolete 20th Century way. Indeed, virtually no high school can teach Differential Equations, the Workhorses of STEM subjects, the old manual way.
3. Your School can reach out into your larger community and offer the above described programs to any teenage student that will transform their math education in a very positive way. Your School will be able to earn some money doing this, if you like, by spreading the word. Your School's reputation should also be increased in the community at large. Your School will have a Math Program that will be Vastly Superior to any Public School.

We can explain all of this to Your School's leaders in a Zoom meeting in less than an hour. This could be tranformational for Your School.

There is also a Video from TMI's CEO, Dr. Craig Hane explaining this.

The Webpages we will discuss will include:
